

Crop Nutrient Reports

Use YEN Nutrition to understand and improve crop nutrition across your farm.

Identify where fertiliser savings could be made.

Includes accurate harvest offtake values for 12 essential nutrients

Offers advice on how to replace offtakes and maintain/improve soil indices

Identifies farm nutrition deficiencies in 6 fields or more

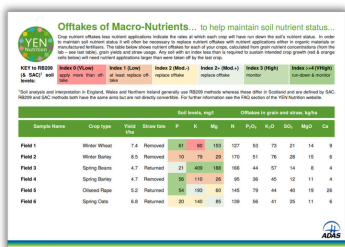

Provides unique benchmarking against threshold values and measurements from this season

Gives suggestions on how to fix identified nutrient deficiencies.

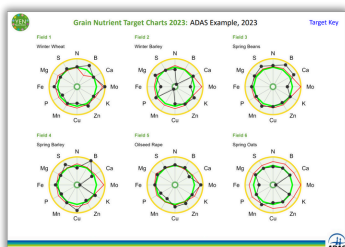

Order at
www.yen.adas.co.uk/projects/yen-nutrition

What you receive

A Nutrient Offtake Report with grain analysis results and estimated offtakes for six fields.

A Benchmarking Report showing how your nutrition compares to others. This will highlight whether a deficiency is caused by seasonal conditions or by your nutrient management plan.

“YEN Nutrition results lead directly to actions – like changing our Manganese doses to match crop needs. We have moved to making field-by-field nitrogen decisions instead of a blanket approach.”

James & Michael Parker, Sherwood Farms, Leics.
